

# Cleaner Future

An aerial photograph of a mangrove forest. The water is a vibrant turquoise color, and the trees are a dense, lush green. The forest is interspersed with small channels and pools of water. The overall scene is a healthy, natural ecosystem.

Enabling a Cleaner,  
More Sustainable Future

**Milehertz recognizes and pursues cleanliness and greenery, and our factory always adheres to its commitment to environmental management.**

## Clear Expectations, Effective Management

***The latest Global Risk Report 2023*** from the World Economic Forum (WEF) points out that mitigating and adapting to climate change, natural disasters and extreme weather events, and biodiversity loss are the top four risks facing the world in the next decade. Environmental, social, and economic risks are deeply interconnected, and there is an urgent need for global implementation of sustainable development changes.

**Operating our business with minimal environmental impact is inherent in Milehertz's purpose.**

We proactively take steps to protect and preserve the natural environment we all share. While pursuing measured and meaningful progress on our own sustainability journey, Milehertz is driven to help customers adopt and adapt clean technologies to enable a better tomorrow.

# Milehertz insists on Clean Future
